ARPwave therapy

Neurological re-education & accelerated muscle recovery

What is ARPwave?

ARPwave (Accelerated Recovery Performance) is an active therapy that uses advanced electrical stimulation to target muscles and nerves, directly.

Unlike traditional therapies, it identifies and treats the root cause of pain by improving communication between your nervous system and muscles.

Who is it for?

Whether you're recovering from an injury, managing a chronic condition, or looking to optimize your athletic performance, ARPwave is tailored to your needs.

It's safe, non-invasive, and personalized to help you achieve your goals.

How does an ARPwave session work?

1. **We locate the root cause of your pain** and place pads on key areas of your body.
2. We connect them to the ARPwave machine and **guide you through specific active movements** while you receive gentle electrical stimulation.
3. You will start to **experience improved range of motion and pain relief** usually during the first session.

What are the benefits?

Pain relief
Relieves chronic and acute pain without drugs

Faster recovery
Speeds up healing from injuries or surgeries

Improved mobility
Restores range of motion and muscle function

Boosts performance
Enhances strength and endurance for athletes and active individuals
